Name: Antisocial Social App

Problem Being Addressed: Iowa State students need a place to talk about classes, campus events, professors, and campus issues without the fear of embarrassment with association to their name.

Description of Project: An android app that allows students of Iowa State University to post to an anonymous forum (that still logs their discussions and links to their account). Students can discuss different classes, resources, post about events on campus, the options are limitless. This app is for the exclusive use of ISU students only (need to create an account with their ISU email). Users will be able to look at certain topics based on hashtags that are included in the posts. Users are also able to make exclusive forums where only certain people are allowed to post. If a post is deemed inappropriate, the users are able to report the post and have it removed. Also ads for days.

Language/Platform/libraries: Android, Springboot, MySQL, Webhooks

Large/Complex:

- Webhooks
- We have little to no experience with mobile development

- Not a lot of experience with databases
- Gmail API for logging in and signing up
- We have a lot of features and can always add more
